

Healthcare operations. Technology that makes it work.

Premier combines healthcare operating experience with technology implementation to help physician practices, surgery centers and office-based labs improve workflows and make better use of their systems and data.

Practice operations

Examine scheduling, staffing, procedure readiness and team handoffs. Clarify responsibilities and identify where workflows or existing tools need attention.

Financial performance

Connect revenue-cycle workflows, collections, payer information and reporting to operating decisions. Keep source records, assumptions and information gaps visible.

ASC & OBL strategy

Evaluate an existing facility or a proposed site. Examine capacity, staffing, case mix, equipment and operating assumptions before deciding what should follow.

Operations and technology, working together

Ali leads the operating work and collaborates with a technology partner when systems, reporting, automation or AI implementation is part of the agreed scope. We start with your existing tools and define contributors, deliverables, responsibilities, fee and timing in writing before work begins.

Your team can carry out the plan, or Premier can provide separately scoped implementation support.

A clinical and operating perspective

Ali Seeling, RN, MSN, brings nursing experience and service as chief operating officer of a physician-owned cardiovascular platform.

What would you like to examine?

Start with the operating question facing your team. Please leave patient information and confidential records out of your email.

A proposed whole-practice format

- A whole-practice assessment
- Two agreed priority analyses
- An opportunity register
- A proposed 90-day action plan
- A leadership readout

A format for discussion, subject to the final written scope. A focused engagement may use different outputs.

Clear responsibilities

Clinical decisions stay with your leadership. Legal, regulatory and valuation opinions remain with qualified advisers. When AI is useful, its task and human review are agreed for the work.
